This involves the use of video conferencing, medical imaging, and other multimedia tools for effective communication between healthcare providers and patients. Telesurgery refers to surgical operations carried out by a surgeon in a distant place by means of a computer or satellite link and robotic instruments	J2 OR any appropriate answer J2 OR any appropriate answer
1(f) i	• Hypertext • Hypermedia • Tab • Audio • Menu	Select any two (2) J2
1(f) ii	• Hypertext refers to links in text-based documents. • Hypermedia refers to connecting the hypertext with media such as graphics, sounds and animations • Tabbed navigation refers to the clickable area at the top that shows another page or area • Audio navigation refers to control and handling multimedia applications using audio. • Menu navigation organized list of links to other web pages, navigates by pressing a key, clicking a mouse, or pressing a touch screen	J2
2(a)(i)	Scripting - The scripts for the text, transitions, audio narrations, voice-overs, and video are written. Editing- All the scripts, interfaces, and text content are edited for clarity, grammar, and consistency.	Select any one (1) J2

	Digitizing arts - Converting existing assets into digital for the use in an electronic medium Modeling & animation - Models of artwork are created, rendered, and then prepared for use in the authoring tool Shooting video - Shoot video based on the edited scripts Recording audio - Composed audio to be used with other MM elements Authoring - All the pieces come together in the authoring tool. The final working product is created Proofreading - Every word on the screen is proofread and checked for consistency. In addition, video and audio are checked against the edited scripts Quality control - Quality control goes on throughout the process. The storyboards are helpful for checking the sequencing	OR any appropriate answer
2(a)(ii)	Testing- The product is tested on multiple computers and monitors. Mastering - Mastering can be as simple as writing a CD-ROM or floppy disk (online or offline). Archiving - The original files, including audio, video, and the native software formats, are archived for future upgrades or revisions. Duplication - The duplicates are created from the original and packaged accordingly. Distribution -The final step in the process is distributing your multimedia project by online or offline method.	Select any one (1) J2 OR any appropriate answer
2(b)	Time Based Allow the designer to arrange elements and events of the multimedia project along a well-defined timeline. Icon based The multimedia elements and events are organized as objects in a structural framework or process. Card/Page based Allow the designer to arrange elements as pages of a book or a stack of a cards	Select any one (1) J2

3(a)	Database systems consist of the data and the DBMS, along with the applications that are associated with them	J2
3(b)	- Reducing data redundancy/ Data Consistency - database system can eliminating duplicate data - Improved Data Integrity - there are no data inconsistencies because the data is centralized - Sharing of Data - The ability to share the same data resource with multiple applications or users because the data are stored in one or more servers in the network - Easier access - queries in database system provide an easy route to search for the required data - Reduced development time - database system capable of organizing information efficiently, protecting valuable data from failure, and accurately communicating with other systems. Reduce the amount of time you spend managing large amounts of data; analyse data in a variety of ways. - Data Security and Privacy - validating the identity of the user who is accessing the database (authentication) and controlling what operations they can perform (authorization). Strong authentication and authorization controls help protect data from attackers. - Backup and Recovery - It provides backup and recovery of data even if it is lost.	Select any one (1) J2
3(c)(i)	Procedure	J1
3(c)(ii)	Data	J1
4(a)	Data integrity ensures the consistency / accuracy of data.	J2
4(b)(i)	Form	J1
4(b)(ii)	Query	J1
5(a)(i)	GPS - satellite navigation system used to determine the ground position/ location of an object or place	J2
5(a)(ii)	Video conference - Meeting between two or more geographically separated people to transmit video and audio data	J2
5(b)(i)	Transmission media - the means consisting of materials or substances capable of carrying one or more signals (data) sent from one computer to another (either by cable or wireless means).	J2
5(b)(ii)	Wireless transmission media	J1
5(b)(iii)	Cellular radio Broadcast radio /radiowave (wifi/bluetooth) <i>**jawapan kedua takder dalam silibus, accept jawapan student yg logik</i>	J1 J1

	● Install personal firewall ● Do not open/reply spam email	OR any appropriate answer
6(d)(ii)	● Protect from information theft / identity theft that manipulate your identity to serve their goals ● Oversharing - Posting videos of your home gives them a full map of your belongings may lead to crime. ● Cookies (remember password) may lead to loss of money	Select any one (1) J2 OR any appropriate answer
6(e)(i)	Internet of Things (IoT) is example of 4IR application	J2
6(e)(ii)	● Smart doorbells help secure your home against break-ins, fire, and floods ● Smart / IP cameras help monitor your home ● Smart Heating & Cooling system be able to adjust temperatures for your comfort from anywhere ● Smart refrigerators have a variety of features that you can control via mobile phone app such as monitor what's inside, and a touchscreen on which you can pull up recipes or create shopping lists. ● Smart appliances are compatible with industry voice assistants, so you can ask Siri, Alexa, or Google Assistant to dispense ice or turn on your oven.	Select any one (1) J2 OR any appropriate answer
