

REVISION PSPM 1 DC014

SESSION 2023/2024

MARKS ALLOCATION

QUESTION	TOPIC/SUBTOPIC	MARKS	TOTAL MARKS
1, 2	TOPIC 1: FUNDAMENTALS OF MULTIMEDIA	20m	
3,4	TOPIC 2: FUNDAMENTALS OF DATABASE	12m	
5,6	TOPIC 3: NETWORK AND INTERNET TECHNOLOGY	38m	
			70m

MARKS ALLOCATION

QUESTION	TOPIC/SUBTOPIC	MARKS	TOTAL MARKS
TOPIC 1: FUNDAMENTALS OF MULTIMEDIA			
1	Describe multimedia elements. Explain the purpose of each multimedia elements.	4m	
	Differentiate 2D, 3D and 4D representation. (Axis, shape, dimension)	2m	
2	Describe pre-production, production and post-production phases.	6m	
	Differentiate among types of multimedia authoring tools. (Time-Based, Icon-Based, Card/Page-Based)	4m	
	Explain multimedia navigation (hypertext, hypermedia, tab, audio, hand gesture)	2m	
	Differentiate offline and online Multimedia Delivery	2m	
			20m

MARKS ALLOCATION

QUESTION	TOPIC/SUBTOPIC	MARKS	TOTAL MARKS
TOPIC 2: FUNDAMENTALS OF DATABASE			
3.	Differentiate between file processing systems and the database system.	6m	
4.	Explain the concept of data integrity.	2m	
	Explain the function of database object (Table, Query, Form, Report)	4m	
			12m

MARKS ALLOCATION

QUESTION	TOPIC/SUBTOPIC	MARKS	TOTAL MARKS
TOPIC 3: NETWORK AND INTERNET TECHNOLOGY			
5	Describe several uses of network.	4m	
	Describe wired and wireless networking media.	8m	
	Describe the function of each network device.	6m	
6	a) Identify types of search tools (Search Engine-Keyword Search, Subject Directory - Directory Search)	6m	
	b) Describe different search strategies (Phrases, search operators, field searches)	4m	
	Describe types of web activities.	4m	
	Describe privacy (Web browsing, E-mail)	4m	
	Discuss latest issues of Internet. (The Internet of Things (IoT), 4iR)	2m	
			38m

QUESTION 1: FUNDAMENTALS OF MULTIMEDIA

QUESTION	ANSWER
1 As a Computer Science student at Mandeville College, Natasha needs to submit a 3D interactive game for a 2-year old child entitled “How to dress like a princess”. (a) Describe one (1) multimedia element , which Natasha should include in her interactive game. [2 marks]	<u>Text</u> • Combination of letters that form a word or sentence that describe a topic which is known as text information OR • Text is a basic element of multimedia that combine alphabets, numbers and symbol
	<u>Graphic</u> • A digital representation of non-text information
	<u>Animation</u> • Animation is a series of graphical images displayed one after another to simulate movement OR • Animation is a process of making a static image look like it is moving.
	<u>Audio</u> • Audio is the use of speech, music and sound effects produced by vibration, as perceived by the sense of hearing.
	<u>Video</u> • Video is a series of frames containing pictures and sound played back at a fast rate

QUESTION 1: FUNDAMENTALS OF MULTIMEDIA

QUESTION	ANSWER
(b) Explain the purpose of the multimedia element mentioned in 1(a). [2 marks]	<u>Text</u> • Effective for conveying basic/fundamental information
	<u>Graphic</u> • Make complex information easy to understand
	<u>Animation</u> • Animation is useful for illustrating concepts which involve movement.
	<u>Audio</u> • Audio adds an exciting dimension to a presentation • sound in a multimedia presentation will capture an audience's attention
	<u>Video</u> • Videos provide concept/context/real situation to help understanding • Videos engage students of all ages and abilities

MULTIMEDIA ELEMENTS

MULTIMEDIA ELEMENT	DEFINITION	PURPOSE
Text	Combination of letters that form a word or sentence that describe a topic which is known as text information	Text is effective for conveying basic information
Graphic	A digital representation of non-text information	Graphic make complex information easy to understand
Animation	A series of graphical images displayed one after another to simulate movement	Animation is useful for illustrating concepts which involve movement.
Audio	The use of speech, music and sound effects produced by vibration, as perceived by the sense of hearing	Audio can adds an exciting dimension to a presentation
Video	A series of frames containing pictures and sound played back at a fast rate	Videos can provide real situation to help users understanding

QUESTION 1: FUNDAMENTALS OF MULTIMEDIA

QUESTION			ANSWER		
(c) Compare specifically the difference between three-dimensional (3D) and four-dimensional (4D) in multimedia application representation in terms of file size and rendering time. [2 marks]				3D	4D
			File Size	Medium size/ Big (e.g: 1-2MB)	Large size/ Bigger (e.g: 10GB)
				Medium hour (e.g: 20-30 min)	Long hour (e.g: >2 hour)
			Rendering Time		
	Three-dimensional (3D)	Four-dimensional (4D)			
File size					
Rendering time					

QUESTION 2: FUNDAMENTALS OF MULTIMEDIA

QUESTION	ANSWER
2 With the excitement and challenge of multimedia production, often people rush in the planning process to continue filming/shooting and editing using authoring tools. (a) Describe the importance of storyboard in pre-production phase.. [2 marks]	• Creating a storyboard allows to prepare a clear outline for developing the multimedia application, including information about the critical requirements. OR • Are the blueprints for your multimedia projects OR • Elaborate the ideas about the script, storyline, time

QUESTION 2: FUNDAMENTALS OF MULTIMEDIA

QUESTION	ANSWER
(b) Describe one (1) step in the following phase: (i) Production _____ _____ [2 marks]	Digitizing Arts (1m) - Converting existing assets into digital for the use in an electronic medium (1m)
	Modelling & Animation (1m) - Models of artwork are created, rendered, and then prepared for use in the authoring tool (1m)
	Shooting Video (1m) - Shoot video based on the edited scripts (1m)
	Recording Audio (1m) - Composed audio to be used with other multimedia elements (1m)
	Authoring (1m) - All the pieces come together in the authoring tool. The final working product is created (1m)
	Proofreading (1m) - Every word on the screen is proofread and checked for consistency.
	Quality control (1m) - Quality control goes on throughout the process. The storyboards are helpful for checking the sequencing (1m)

QUESTION 2: FUNDAMENTALS OF MULTIMEDIA

QUESTION	ANSWER
(b) Describe one (1) step in the following phase: [2 marks] (ii) Post-production	Testing (1m) - The product is tested on multiple computer from different users. (1m)
	Mastering (1m)- Writing the final multimedia products in suitable platform. (1m)
	Archiving (1m)- The original multimedia files are archived for future upgrade and revisions. (1m)
	Duplication (1m)- The duplicates are created from the original and packaged accordingly (1m)
	Distribution (1m)- The final step in the process is distributing you multimedia project. (1m)

MULTIMEDIA PRODUCTION

Pre-production	Production	Post-production
The process before producing multimedia project.	The process in which multimedia project is produced.	The process after the production of multimedia project.
1. Planning – determine the content, time taken, the cost and person in charge of the project	1. Digitizing Arts - Converting existing assets into digital for the use in an electronic medium	1. Testing - The product is tested on multiple computer from different users.
2. Resource Organization - The content is arranged categories so that comprehensive task planning can be executed.	2. Modelling & Animation - Models of artwork are created, rendered, and then prepared for use in the authoring tool	2. Mastering - Writing the final multimedia products in suitable platform.
3. Flowchart – a visual representation to outline the content.	3. Shooting Video - Shoot video based on the edited scripts	3. Archiving - The original multimedia files are archived for future upgrade and revisions.
4. Navigation - the signpost of each task by using CPM, PERT chart or Gantt chart	4. Recording Audio - Composed audio to be used with other multimedia elements	4. Duplication - The duplicates are created from the original and packaged accordingly
5. Define Screen Action - screen or interface action directs how the interface responds to the user.	5. Authoring - All the pieces come together in the authoring tool. The final working product is created	5. Distribution - The final step in the process is distributing you multimedia project.
	6. Proofreading - Every word on the screen is proofread and checked for consistency.	
	7. Quality control - Quality control goes on throughout the process.	

QUESTION 2: FUNDAMENTALS OF MULTIMEDIA

QUESTION		ANSWER							
(c) Multimedia authoring tools can be categorized into certain groups, based on the method used for sequencing multimedia elements, events and their corresponding navigation. (i) Describe one (1) characteristic for two types of multimedia authoring tools in the space provided below: [4 marks] <table><tr><th>Types of Authoring Tool</th><th>Characteristic</th></tr><tr><td></td><td></td></tr><tr><td></td><td></td></tr></table>		Types of Authoring Tool	Characteristic					Authoring Tool	Characteristic
		Types of Authoring Tool	Characteristic						
Time-based	The <u>multimedia elements or events</u> are presented and <u>organized along a timeline</u>								
Icon-based	The <u>multimedia elements or events</u> are <u>organized as objects in a structural framework</u>								
Card/Page-based	The <u>multimedia elements or events</u> are <u>organized as pages of a book or a stack of a cards.</u>								

MULTIMEDIA AUTHORIZING TOOLS

	TIME-BASED	ICON-BASED	PAGE-BASED
Characteristics	The <u>multimedia elements or events</u> are presented and <u>organized along a timeline</u>	The <u>multimedia elements or events</u> are <u>organized as objects in a structural framework</u>	The <u>multimedia elements or events</u> are <u>organized as pages of a book or a stack of a cards.</u>
Usage	Animation and video	Interactivity	Educational content
Example of software	Adobe Animate, MOHO	Scratch, Icon Author	Google Slide, Prezi

QUESTION 2: FUNDAMENTALS OF MULTIMEDIA

(ii) Explain two (2) types of navigation identifies in FIGURE 2.

[2 marks]

FIGURE 2
RAJAH 2

ANSWER

Type of Navigation	Explanation
Hypertext	Refers to the system of managing the information related to the plain text OR Link in text based document.
Hypermedia	Refers to connecting the hypertext with media such as graphics, sounds and animations. OR Link in non-text based document
Tab	Clickable area at the top that shows another page or area.
Menu	Menus consist of text lists of topics or sometimes surrounded by boxes to enable users to interact with the multimedia application.

QUESTION 2: FUNDAMENTALS OF MULTIMEDIA

QUESTION	ANSWER
(d) Since the era of the COVID-19 pandemic hit the world, this medium has become the leading multimedia delivery medium in the field of education. (ii) Explain the medium of delivery mentioned in the above statement. [2 marks]	online – web based or cloud based can be used to deliver content because the government’s enforcement of the Movement Control Order (MCO) / the closure of schools, colleges, universities, <u>learning can happen anywhere and anytime</u>
	OR web based – multimedia application can be delivered through web page/ web site such as Youtube, EPSA, <u>learning can happen anywhere and anytime</u>
	OR cloud based – multimedia application can be store in storage computing and communication technology which enable the realization of multimedia service networks such as video-on-demand service, <u>learning can happen anywhere and anytime</u>

QUESTION 2: FUNDAMENTALS OF MULTIMEDIA

QUESTION	ANSWER
(ii) Explain the potential weakness of the delivery techniques mentioned in the above statement. [2 marks]	• Internet connection is required to deliver all the multimedia applications (1 mark) • The speed of transfer (1 mark)

MULTIMEDIA DELIVERY

ONLINE	OFFLINE
Require broadband Internet connection	Do not require broadband Internet connection
Can be changed and updated easily.	Permanent and not changeable.
Example of delivery: • Web-based • Cloud-based	Example of delivery: • hard disk • solid state drive (SSD) • CD/DVD/Blu-Ray

QUESTION 3: FUNDAMENTALS OF DATABASE

QUESTION

3 Various kinds of database exist, each adhering to a different concept.

A system used to store and manage data in which each department within an organization has its own set of files.

(a) Identify the approach to store and manage data as mentioned in the above statement.

[1 mark]

ANSWER

- File-processing system/ file processing/ file system

QUESTION 3: FUNDAMENTALS OF DATABASE

QUESTION	ANSWER
(b) Describe one (1) disadvantage of the approach mentioned in 3 (a). [2 marks]	• Data redundancy - occurs where no central control causes the same data being repeatedly stored. • Isolated data - data is stored in separate files in different department • Accessibility – Can be accessed only by single user.

QUESTION 3: FUNDAMENTALS OF DATABASE

QUESTION

(d) Explain another type of approach to storing and managing data.
[3 marks]

Approach	Explanation

ANSWER

Approach	Explanation
Database System	A collection of data organized in a manner that allows access, retrieval and use of that data

01

DIFFERENTIATE BETWEEN FILE PROCESSING SYSTEMS AND THE DATABASE SYSTEM

02

03

	FILE PROCESSING SYSTEMS	DATABASE SYSTEM
Description	Each department or area within an organization has its own set of files.	Many programs and users share the data in the database.
How the data is stored and manipulated	File processing systems were originally designed for single user.	Databases are designed for multiple users
Who can access the data	Allow single user or small number of users who don't need to do a lot of incredibly complicated data manipulation.	Allow multiple users to access the database at the same time by using highly complex logic and language.
How much data can be stored	Relatively smaller amount of data	Relatively larger amount of data

QUESTION 4: FUNDAMENTALS OF DATABASE

QUESTION	ANSWER
4 A database is a collection of data organized in a manner that allows access, retrieval, and use of that data. (a) Describe the importance of data integrity in database. [2 marks]	• ensures the accuracy, completeness, and consistency of data

QUESTION 4: FUNDAMENTALS OF DATABASE

QUESTION

(b) Identify the database object based in the given situation.

[2 marks]

Situation	Database Object
Ahmad would like to extract specific information from the database.	
Ali needs to create this database object so that he can enter or change data through a window on the screen.	

ANSWER

Situation	Database Object
Ahmad would like to extract specific information from the database.	Query
Ali needs to create this database object so that he can enter or change data through a window on the screen.	Form

SUMMARY – FUNCTION OF DATABASE OBJECT

TABLE	FORM	QUERY	REPORT
To arrange data in rows and columns	To enter or edit data through a window on the screen. .	To specifies which records should be retrieved by specifying criteria.	To design a report on the screen
To enter data in rows and column.	Allows viewing data, one record at a time.	Can specify certain fields to be displayed.	To display or print the data in the database

QUESTION 5: NETWORK AND INTERNET TECHNOLOGY

QUESTION	ANSWER
5 The global Internet is powered by thousands of interconnected networks in countries around the world. (a) Explain how network is used in telemedicine. [2 marks]	• the use of networking technology to <u>provide medical information and services</u>. OR • The use of network technology by a medical professional to diagnose and treat patients.

QUESTION 5: NETWORK AND INTERNET TECHNOLOGY

QUESTION	ANSWER
(b) State two (2) other usages of the network besides the one mentioned in 5 (a). [2 marks]	• The Internet Applications/ The Internet • Telephone Service • Television and Radio Broadcasting • Global Positioning System (GPS) • Applications Monitoring Systems • Multimedia Networking • Videoconferencing • Collaborative Computing and Telecommuting

NETWORK USAGE

The Internet - allows many networking applications to take place such as information retrieval, shopping, entertainment, accessing web and exchanging e-mail	Telephone Service -provides telephone service to conventional landline phones or cellular network	Television and Radio Broadcasting - telecommunications network for distribution of television program and radio signal to public audience	Global Positioning System (GPS) - a satellite navigation system used to determine the ground position of an object
Application Monitoring Systems - a networking technology to determine the current location or status of an object	Multimedia Networking - the used of networks to deliver multimedia content to devices on the home network	Videoconferencing - the use of networking technology to conduct real-time, face-to-face meetings between individuals physically located in different places.	Collaborative Computing and Telecommuting - a networking technology with collaborative software tools to enable individuals to work together on documents and other project components from home or outside of office.
Telemedicine - the use of networking technology to provide medical information and services			

QUESTION 5: NETWORK AND INTERNET TECHNOLOGY

QUESTION		ANSWER																				
(d) State the type of wired transmission media based on the given usage. [4 marks] <table><tr><th>Usage</th><th>Types of wired transmission media</th></tr><tr><td>Used inside most homes for telephone communications.</td><td></td></tr><tr><td>Used for the high-speed backbone lines of a network, such as to connect networks housed in separate buildings or for the Internet infrastructure.</td><td></td></tr><tr><td>Used today in computer networks, for short-run telephone transmission outside of the home, and cable television delivery.</td><td></td></tr><tr><td>Commonly used for a network such as a computer laboratory.</td><td></td></tr></table>		Usage	Types of wired transmission media	Used inside most homes for telephone communications.		Used for the high-speed backbone lines of a network, such as to connect networks housed in separate buildings or for the Internet infrastructure.		Used today in computer networks, for short-run telephone transmission outside of the home, and cable television delivery.		Commonly used for a network such as a computer laboratory.		<table><tr><th>Usage</th><th>Types of wired transmission media</th></tr><tr><td>Used inside most homes for telephone communications.</td><td>Twisted Pair</td></tr><tr><td>Used for the high-speed backbone lines of a network, such as to connect networks housed in separate buildings or for the Internet infrastructure.</td><td>Fiber optic</td></tr><tr><td>Used today in computer networks, for short-run telephone transmission outside of the home, and cable television delivery.</td><td>Coaxial Cable</td></tr><tr><td>Commonly used for a network such as a computer laboratory.</td><td>Twisted Pair</td></tr></table>	Usage	Types of wired transmission media	Used inside most homes for telephone communications.	Twisted Pair	Used for the high-speed backbone lines of a network, such as to connect networks housed in separate buildings or for the Internet infrastructure.	Fiber optic	Used today in computer networks, for short-run telephone transmission outside of the home, and cable television delivery.	Coaxial Cable	Commonly used for a network such as a computer laboratory.	Twisted Pair
		Usage	Types of wired transmission media																			
		Used inside most homes for telephone communications.																				
		Used for the high-speed backbone lines of a network, such as to connect networks housed in separate buildings or for the Internet infrastructure.																				
		Used today in computer networks, for short-run telephone transmission outside of the home, and cable television delivery.																				
		Commonly used for a network such as a computer laboratory.																				
Usage	Types of wired transmission media																					
Used inside most homes for telephone communications.	Twisted Pair																					
Used for the high-speed backbone lines of a network, such as to connect networks housed in separate buildings or for the Internet infrastructure.	Fiber optic																					
Used today in computer networks, for short-run telephone transmission outside of the home, and cable television delivery.	Coaxial Cable																					
Commonly used for a network such as a computer laboratory.	Twisted Pair																					

QUESTION 5: NETWORK AND INTERNET TECHNOLOGY

QUESTION

(d) State the type of wireless transmission media based on the given characteristics.

[4 marks]

Characteristics	Types of wireless transmission media
This type of transmission media uses high-frequency radio signals that can send large quantities of data at high speed over long distances.	
Sends data as light rays over relatively short distances.	
Radio signals are sent to and from cell phones via cellular(cell) towers-tall metal towers with antenna on top.	
Data is transmitted using devices launched into orbit around the earth to receive and transmit signals to and from the earth.	

ANSWER

Characteristics	Types of wireless transmission media
This type of transmission media uses high-frequency radio signals that can send large quantities of data at high speed over long distances.	Microwave
Sends data as light rays over relatively short distances.	Infrared
Radio signals are sent to and from cell phones via cellular(cell) towers-tall metal towers with antenna on top.	Cellular radio/ Cellular
Data is transmitted using devices launched into orbit around the earth to receive and transmit signals to and from the earth.	Satellite transmission

NETWORKING MEDIA / TRANSMISSION MEDIA

WIRED (GUIDED MEDIA)	WIRELESS (UNGUIDED MEDIA)
Transfer signal by using wire or cable from source to destination.	Transfer signal by air, water or vacuum from source to destination.
Suitable for short distance communication	Suitable for long distance communication
Signal is send in the form of electrical and optical pulses	Signal is send in a form of electromagnetic waves
Implementation of the system is less complex.	Implementation of the system is more complex.
Types of wired media:	Types of wireless media:
Twisted Pair – commonly use inside most homes for telephone and simple network communications	Cellular radio - radio signals are sent to and from cell phones via cellular towers.
Coaxial Cable - used in computer networks, for short-run telephone transmission outside of the home, and cable television delivery	Microwave - uses high-frequency radio signals that can send large quantities of data at high speed over long distances Satellite - data is transmitted using devices launched into orbit around the earth to receive and transmit signals to and from the earth.
Fiber optic - used for the high-speed backbone lines of a network	Infrared - sends data as light rays over relatively short distances.

QUESTION 5: NETWORK AND INTERNET TECHNOLOGY

QUESTION

(e) Identify the communication device based on the given function..

[6 marks]

Function	Communication device
A device on the network that amplifies signals along with a network.	
Enables a computer to communicate over analogue networking media.	
A device that connects multiple networks; routes packets to their next location to efficiently reach their destination.	
A device is used to connect multiple devices on a single network.	
Used to connect a computer to a network such as a home or business network	
A device that allows wireless devices to connect to a network.	

ANSWER

Function	Communication device
A device on the network that amplifies signals along with a network.	Repeater
Enables a computer to communicate over analogue networking media.	Modem
A device that connects multiple networks; routes packets to their next location to efficiently reach their destination.	Router
A device is used to connect multiple devices on a single network.	Switches
Used to connect a computer to a network such as a home or business network	Network Interface Card/ NIC/ Network card/ Network adapter card
A device that allows wireless devices to connect to a network.	Wireless Access Point/ WAP

SUMMARY

Define Modem.

Modem is a network device that convert digital signal into analog signal from the transmitter PC to be sent over a network and convert the analog signal back into digital signal when it reaches the receiver PC.

Modulator- convert the digital signal into analog signal

Demodulator- convert the analog signal into digital signal

What is the function of Network Interface Card?

NIC is a network device that connect computer to a network. It allows the computer without the built-in networking capability to access the network.

Describe how repeaters work.

Repeater is a network device that regenerate signal to extend transmissions so that the signal can cover a longer distance.

What is hub?

Hub is a network central device that allow computer and other devices to communicate and share resources over a network. Hub transmit the data to all the devices in the network without knowing the real destination of device that the data intended to.

Explain the function of switch.

Switch is a network central device that connect computer with other devices on a network. Switch identify the intended device to receive the signal and send the signal to the correct device only.

How does Wireless Access Point helps in network communication?

Wireless access point allows computer and other devices to transfer data wirelessly among themselves or to a wired network using wireless technology such as Wi-Fi.

State the importance of router in network communication.

Router is a network device that connects multiple network and allows the network devices and users to access the internet. Routers connects multiple switches in multiple network to form a larger network.

What is the difference between hub and switch?

Hub transmit the data to all the devices in the network without knowing the real destination of device that the data intended to.

Switch identify the intended device to receive the signal and send the signal to the correct device only.

What is the difference between switch and router?

Switch connects computer and other devices in a network.

Router connects multiple network to the internet.

QUESTION 6 : NETWORK AND INTERNET TECHNOLOGY

QUESTION

6 Most people who use the Internet to find specific information.

(a) Give **two (2)** types of search tools.

[2 marks]

Types of Search Tool

(b) Explain the characteristics of both types of search tools mentioned in 6(a).

[4 marks]

Types of Search Tools	Characteristics

ANSWER

Types of Search Tool
Subject directory/ Directory search
Search engine/ Keyword Search

Types of Search Tools	Characteristics
Subject directory	A search tool that classifies webpages in an organized set of categories and subcategories.
Search engine	A search tool that uses keywords to find information that related to specific topic

QUESTION 6: NETWORK AND INTERNET TECHNOLOGY

QUESTION		ANSWER	
(c) Identify the type of search strategies based on the given description. [4 marks]			
Description	Search Strategies	Description	Search Strategies
Ahmad would like to search for information regarding the COVID-19 vaccine. To improve the quality of the hits returned, he uses more than one keyword in his keyword search.		Ahmad would like to search for information regarding the COVID-19 vaccine. To improve the quality of the hits returned, he uses more than one keyword in his keyword search.	using phrases
Ani wants a search engine to find all documents that contain recipes for seafood appetizers, so she uses the search phrase seafood appetizers recipes or “seafood appetizers recipes”		Ani wants a search engine to find all documents that contain recipes for seafood appetizers, so she uses the search phrase seafood appetizers recipes or “seafood appetizers recipes”	using search operator/ boolean operator
This type of search strategy limits the search to a particular search characteristic such as the page title, URL, page text, top-level domain, or Website		This type of search strategy limits the search to a particular search characteristic such as the page title, URL, page text, top-level domain, or Website	using field searches
This strategy is used when basic searching is not producing the desired results.		This strategy is used when basic searching is not producing the desired results.	using field searches

QUESTION 6: NETWORK AND INTERNET TECHNOLOGY

QUESTION

(d) In this pandemic era, many people use Websites to communicate. There are many types of Web activities that can be used.
Identify the types of Web activities based on the given description.

[4 marks]

Description	Types of Web activities
A way off exchanging real-time typed messages with other individuals.	
A site that creates a community of individuals with common interests.	
Among the advantages of this type of Web activity includes reduced costs, increased customer satisfaction, a broader customer base, and potentially higher sales.	
The use of Web content such as online syllabi, schedules, discussion boards, podcasts, and tutorials as required or suggested supplement.	

ANSWER

Description	Types of Web activities
A way off exchanging real-time typed messages with other individuals.	Instant Messaging
A site that creates a community of individuals with common interests.	Social Networking/ Social Media
Among the advantages of this type of Web activity includes reduced costs, increased customer satisfaction, a broader customer base, and potentially higher sales.	e-commerce
The use of Web content such as online syllabi, schedules, discussion boards, podcasts, and tutorials as required or suggested supplement.	Online Education and Writing/ Online Education/ E-education

TYPES OF INTERNET/WEB ACTIVITIES

Online Communications	Social Networking/ Social Media	e-Commerce	Online Entertainment	Online education
• Twittering and Social networking Updates • Forums • Voice over Internet Protocol (VoIP) • Web conferences and Webinars	• Facebook/MySpace/Twitter • Instagram/Tiktok • Flickr/Fotki • Pinterest • Youtube • Meetup	• Online Shopping • Online Banking • Online Auction • Online Investing	• Online Music • Online TV, Videos and Movies • Online Games	• Online education • Distance Learning • Online Testing/Assessment • Web-based Training (WBT)
Online News , Reference and Information				
• Online News • Online Reference				

QUESTION 6: NETWORK AND INTERNET TECHNOLOGY

QUESTION	ANSWER
(e) When the Internet was created, it was meant to be a utopic space where people would communicate and learn free of restrictions. (i) Explain why web browsing privacy becoming a concern nowadays. [2 marks]	As more and more transactions and daily activities are being performed online, there is the potential for vast amounts of private information to be collected and distributed without the individual's knowledge or permission.

QUESTION 6: NETWORK AND INTERNET TECHNOLOGY

QUESTION	ANSWER
(ii) Describe one (1) reason why people encrypt their emails before sending them. [2 marks]	• cannot be read by anyone other than the intended recipient OR • e-mail can be transmitted safely

QUESTION 6: NETWORK AND INTERNET TECHNOLOGY

QUESTION	ANSWER
(f) The Internet of Things (IoT) has grown so fast and affected the world in every field of life. Explain IoT. [2 marks]	• physical objects with sensors, processing ability, software and other technologies that connect and exchange data with other device and system over Internet network

LATEST ISSUE OF INTERNET

Fourth Industrial Revolution (4IR)	Artificial Intelligent (AI)
4IR conceptualizes rapid change to technology, industries, and societal patterns and processes in the 21st century due to increasing interconnectivity and smart automation.	AI refers to the simulation of human intelligence in machines that are programmed to think like humans and mimic their actions.
Autonomous Vehicle (AV)	The Internet of things (IoT)
AV refers to driverless vehicle that is able to operate itself and perform necessary functions without any human intervention, through ability to sense its surroundings.	IoT describes physical objects (device) with sensors, processing ability, software and other technologies that connect and exchange data with other devices and systems over the Internet or other communications networks.

BEST OF LUCK FOR PSPM1

THANK YOU
