ANSWER SCHEME

DC014

Question No.	Answer	Mark
1 (a)	Graphic is a digital representation of non-text information such as a drawing, chart, or photo. Animation is a series of graphical images displayed one after another to simulate movement. Video is the arrangement or sequence of static pictures that give an illusion as though we are looking at moving pictures. Audio (sound) are vibrations in the air that create waves of pressure, and audio includes spoken word, voices, music and even noise.	Choose any one (1) J2
1 (b)	Graphic is used to present information more attractively & effectively. Video is used to effectively present messages and reinforce story Or to firmly hold a student's interest in a computer-based learning project. Or A powerful tool for bringing computer users closer to real world, attract the user's attention and emotions. Animation is used to make static presentation come alive, and to present complex concept more briefly and easily. Audio is used to provides listening pleasure of music or the startling accent of special effects or act as background music.	Choose any one (1) J2
1(c)	2D use x-axis and y-axis while 3D use x-axis, y-axis, and the z-axis.	J2
2(a)	P - Post-production is the assembly phase of a project. Q - Production is the acquisition or design phase of a project where the individual pieces of a multimedia project are acquired or produced. R - Pre-production is the planning phase of the design process and includes a broad set of activities required for a successful outcome.	J6
2(b)	Types of Authoring Tools	J4
	R	
	S	
2(c)	Hypertext refers to links in text-based documents.	J2

Question No.	Answer		Mark
2(d)			J2/J2 Choose any one (1) pair of answer. TOTAL = J4
	DVD	WEB BASED	
	Contents are permanent and not changeable	Contents can be changed and updated at any time by the developer	
	Content remains as original	Content prone to damage and loss	
	Can be accessed without internet	Require broadband Internet connection.	
	Can store high end multimedia elements such as video	Limited in picture size and low-resolution video	
	Relatively faster data transfer rate	Subject to the constraints of the viewer's Internet Service Provider (ISP) or network	
	Can be permanently stored and are not editable	Easy editing but can be changed and damaged or deleted by irresponsible individuals	
	Information on a multimedia can be quickly outdated.	Information for multimedia can be updated easily and is cheaper.	
3(a)	File Processing System	Database System	J2/J2 Choose any one(1) pair of answer. TOTAL = J4
	Each department or area within an organization has its own set of files.	Many programs and users share the data in the database.	
	Poor data access difficult to access data that is stored in separate files in different department.	Easier data access data stored in database are shared over network easily access by user.	
	Redundant data same fields are stored in multiple files	Reduce data redundancy most of data are stored in only one file.	
	Relatively smaller amount of data can be stored	Relatively larger amount of data

Question No.	Answer			Mark
3(b)		Advantage	Disadvantage	J1 Choose any one (1) advantage J1 and any one (1) disadvantage
	Database System	1. Reduce data redundancy where most data are stored in one file, which also reduce duplication of data. 2. Reduce data redundancy where most data are stored in one file, which also reduce duplication of data. 3. Improved data integrity where data is accurate and consistent in the database. 4. Sharing of data where data in database usually shared over the network by the entire organization. 5. Easier access, where database allow non-technical user to access and maintain data. 6. Reduce the development time, it is easier and faster to develop programs that used database approach. 7. Data security, only authorized user are allowed to access the database using username and password. 8. Backup and recovery, Database Management System (DBMS) automatically doing the backup and recovery. 9. Data consistency is ensured in database system because there is no data redundancy.	1. High complexity, a database could be more complex compared to a file processing system. 2. The need for skilled staff to operate the database to make sure the database works optimally. 3. More vulnerable where the data in database can be riskier than the data in file processing system. 4. Big size due to the increasing data in large organization, more data need to be updated. 5. More costly because high cost of software and hardware is required for more memory and processing power. 6. Increase upgradation costs due to new functionalities might be added to the database system.

Question No.	Answer		Mark
4	Descriptions	Database object	J4
	A window or screen that contains various fields, or spaces to enter data.	Form	
	An organization of information or data, typically in rows and columns.	Table	
	A question you define and send to the data source to retrieve the data.	Query	
	An organized and formatted view of the data the query retrieved.	Report	
5(a)	A collection of computers and other hardware devices connected, users can share hardware, software, and data, as well as communicate with each other electronically.		J2
5(b)	• The Internet • Telephone Service • Television and Radio Broadcasting • Global Positioning System (GPS) Applications • Monitoring Systems • Multimedia Networking • Videoconferencing, Collaborative Computing and Telecommuting • Telemedicine		J2 Choose any two (2)
5(c)	Global Positioning System (GPS)	A satellite navigation system used to determine the ground position of an object.	J4
	Telemedicine	The use of networking technology to provide medical information and services.	
5(d)	Descriptions	Network device	J4
	Enables a computer or device that does not have built-in networking capability to access a network.	Network card	
	A central communications device that allows computers and devices to transfer data wirelessly to a wired network.	Wireless access point	
	Provides a central point for cables in a network.	Hub/Switch	
	A device that connects multiple computers together and transmits data to its correct destination on a network.	Router

Question No.	Answer			Mark
5(e)	Type A : Wireless Transmission Media		Type B: Wired Transmission Media	J4
	• The signal is broadcasted through air • Less Secure • Used for larger distances		• High Speed • Secure • Used for comparatively shorter distances	
	Example: cellular radio transmission or microwave transmission, and satellite transmission or infrared (IR) transmission		Example: twisted-pair cable or coaxial cable or fiber-optic cable	
5(f)(i)	Hub Switch Network Card			J3
5(f)(ii)	Twisted pair cable			J1
6(a)	Search Tool	Search Engine - Keyword Search	Subject Directory - Directory Search	J2/J2
	Description	Software that finds websites, webpages, images, videos, news, maps, and other information related to a specific topic. OR list the web pages that match the search criteria	A subject directory classifies webpages in an organized set of categories, such as sports or shopping, and related subcategories OR use list of categories users will click the category or subcategories that best matches with what they are looking for	
	Example of search tool	Yahoo search Or Google search Or Accept any other correct answers	Yahoo directory Or Google directory Or Accept any other correct answers

Question No.	Answer	Mark								
6(b)	<table><tr><th>Search strategy</th><th>Description</th></tr><tr><td>Phrases search</td><td>Use more than one keyword in a keyword search.</td></tr><tr><td>Boolean search</td><td>AND, OR, and NOT can often be used in keyword searches.</td></tr><tr><td>Field Search</td><td>Limits the search to a particular search characteristic such as the page title</td></tr></table>	Search strategy	Description	Phrases search	Use more than one keyword in a keyword search.	Boolean search	AND, OR, and NOT can often be used in keyword searches.	Field Search	Limits the search to a particular search characteristic such as the page title	J3
	Search strategy	Description								
	Phrases search	Use more than one keyword in a keyword search.								
	Boolean search	AND, OR, and NOT can often be used in keyword searches.								
Field Search	Limits the search to a particular search characteristic such as the page title									
6(c)	X: Author's name Y: Published year Z: Book Title	J3								
6(d)	To avoid plagiarism by citing words and ideas used by other authors. Or To show your reader you have done proper research by listing sources you used to get your information. Or To be responsible scholar by giving credit to other researchers and acknowledging their ideas. Or To allow your reader to track down the sources you used by citing them accurately in your paper. Or Accept any other suitable answer.	J2								
6(e)	Job redeployment due to change in skills requirements. Or Irresponsible use and manipulation of technology. Or Social interaction and societal wellbeing affected. Or Erosion of trust in society due to increased privacy concerns and cyber threats. Or Depreciation of value and ethics. Or Accept any other suitable answer.	J2								
6(f)	Uses a sports-tested acceleremeter to track your daily activity like running, walking, dancing and basketball in steps, time of day and calories burned. Or IoT device can be used to enable remote health monitoring and emergency notification systems. Or Accept any other suitable answer.	J2
