

Answer Scheme Trial PSPM KMKt DC014 2024/2025

Question	Answer scheme	Mark										
1(a)	- Text is a basic element of multimedia that combines alphabet, number, symbols to create words and sentences. - Animation is a series of graphical images displayed one after another to simulate movement. - Video is the arrangement or sequence of static pictures that give an illusion as though we are looking at moving pictures. - Audio (sound) are vibrations in the air that create waves of pressure, and audio includes spoken word, voices, music and even noise.	Choose any one (1) J2 OR any appropriate answer										
1(b)	<table><tr><th>Element</th><th>Explanation</th></tr><tr><td>Text</td><td> - To increase understanding - To represent fact such as date, title - As a caption to a graphic - To serve as a link/hypertext to other pages </td></tr><tr><td>Audio</td><td> - A sound in a multimedia presentation will capture an audience's attention. - To increase the associations the end-users make with the information in their mind (sound of a duck), thus increasing their retention rate. - Audio adds an exciting dimension to a presentation. </td></tr><tr><td>Animation</td><td> - Animation is useful for illustrating concepts which involve movement. - Can help organize thoughts and illustrate processes. - Can graphically simplify complicated concepts and convey complex inter-relationships, which are difficult to visualize. - Inject humor and light-heartedness in a presentation via an animated cartoon. - Can attract audience attention </td></tr><tr><td>Video</td><td> - Video shows the real situation of the event hence helps viewers retain more of what they see. - Provides a powerful and realistic impact in a multimedia program </td></tr></table>	Element	Explanation	Text	- To increase understanding - To represent fact such as date, title - As a caption to a graphic - To serve as a link/hypertext to other pages	Audio	- A sound in a multimedia presentation will capture an audience's attention. - To increase the associations the end-users make with the information in their mind (sound of a duck), thus increasing their retention rate. - Audio adds an exciting dimension to a presentation.	Animation	- Animation is useful for illustrating concepts which involve movement. - Can help organize thoughts and illustrate processes. - Can graphically simplify complicated concepts and convey complex inter-relationships, which are difficult to visualize. - Inject humor and light-heartedness in a presentation via an animated cartoon. - Can attract audience attention	Video	- Video shows the real situation of the event hence helps viewers retain more of what they see. - Provides a powerful and realistic impact in a multimedia program	Select any two (2) J2, J2 OR any appropriate answer
Element	Explanation											
Text	- To increase understanding - To represent fact such as date, title - As a caption to a graphic - To serve as a link/hypertext to other pages											
Audio	- A sound in a multimedia presentation will capture an audience's attention. - To increase the associations the end-users make with the information in their mind (sound of a duck), thus increasing their retention rate. - Audio adds an exciting dimension to a presentation.											
Animation	- Animation is useful for illustrating concepts which involve movement. - Can help organize thoughts and illustrate processes. - Can graphically simplify complicated concepts and convey complex inter-relationships, which are difficult to visualize. - Inject humor and light-heartedness in a presentation via an animated cartoon. - Can attract audience attention											
Video	- Video shows the real situation of the event hence helps viewers retain more of what they see. - Provides a powerful and realistic impact in a multimedia program											
1(c)	2D use x-axis and y-axis while 3D use x-axis, y-axis, and the z-axis.	J2										

1(d)	<u>Online</u> Online multimedia option is better if the content needs to regularly update. OR <u>Offline</u> Offline multimedia option is better if the content is very large and have to deliver to small amount of people	Select any one (1) J2 OR any appropriate answer
1(e)	i. Entertainment • Technological advancements in the creation of games, movies, ads, and other forms of entertainment. • Movies, ADs, and Short clips are now being created using special effects and animations. • Diverting users, engaging them in amazing experiences such as reading a book, listening to music, enjoying videos, and playing a game. ii. Health Care • Telemedicine: The use of multimedia is prevalent in telemedicine, where healthcare professionals can remotely diagnose, consult, and monitor patients. This involves the use of video conferencing, medical imaging, and other multimedia tools for effective communication between healthcare providers and patients. • Telesurgery refers to surgical operations carried out by a surgeon in a distant place by means of a computer or satellite link and robotic instruments	J2 OR any appropriate answer J2 OR any appropriate answer
1(f) i	• Hypertext • Hypermedia • Tabbed navigation • Audio navigation • Menu • Gesture based navigation	Select any two (2) J2
1(f) ii	• Hypertext refers to links in text-based documents. • Hypermedia refers to connecting the hypertext with media such as graphics, sounds and animations • Tabbed navigation refers to the clickable area at the top that shows another page or area • Audio navigation refers to control and handling multimedia applications using audio. • Menu navigation organized list of links to other web pages, navigates by pressing a key, clicking a mouse, or pressing a touch screen	J2

2(a)(i)	Scripting - The scripts for the text, transitions, audio narrations, voice-overs, and video are written. Editing- All the scripts, interfaces, and text content are edited for clarity, grammar, and consistency. Digitizing arts - Converting existing assets into digital for the use in an electronic medium Modeling & animation - Models of artwork are created, rendered, and then prepared for use in the authoring tool Shooting video - Shoot video based on the edited scripts Recording audio - Composed audio to be used with other multimedia elements Authoring - All the pieces come together in the authoring tool. The final working product is created Proofreading - Every word on the screen is proofread and checked for consistency. In addition, video and audio are checked against the edited scripts Quality control - Quality control goes on throughout the process. The storyboards are helpful for checking the sequencing	Select any one (1) J2 OR any appropriate answer
2(a)(ii)	Testing- The product is tested on multiple computers and monitors. Mastering - Mastering can be as simple as writing a CD-ROM or floppy disk (online or offline). Archiving - The original files, including audio, video, and the native software formats, are archived for future upgrades or revisions. Duplication - The duplicates are created from the original and packaged accordingly. Distribution -The final step in the process is distributing your multimedia project by online or offline method.	Select any one (1) J2 OR any appropriate answer
2(b)	Time Based The multimedia elements and events are organized along a well-defined timeline. Icon based The multimedia elements and events are organized as objects in a structural framework or process. Card/Page based	Select any one (1) J2

	The multimedia elements and events are organized as pages of a book or a stack of a cards	
3(a)	Database systems in e-commerce consist of the data to store information for retrieving the product details, customer information, track transactions, and further, maintain the inventory.	J2
3(b)	- Reducing data redundancy/ Data Consistency - database system can eliminating duplicate data - Improved Data Integrity - there are no data inconsistencies because the data is centralized - Sharing of Data - The ability to share the same data resource with multiple applications or users because the data are stored in one or more servers in the network - Easier access - queries in database system provide an easy route to search for the required data - Reduced development time - database system capable of organizing information efficiently, protecting valuable data from failure, and accurately communicating with other systems. Reduce the amount of time you spend managing large amounts of data; analyse data in a variety of ways. - Data Security and Privacy - validating the identity of the user who is accessing the database (authentication) and controlling what operations they can perform (authorization). Strong authentication and authorization controls help protect data from attackers. - Backup and Recovery - It provides backup and recovery of data even if it is lost.	Select any one (1) J2
3(c)(i)	Procedure	J1
3(c)(ii)	Data	J1
4(a)	Data accuracy : Focuses on the correctness of data values, OR ensuring that they are free from errors, accurately representing real-world entities. Data consistency: The uniformity of data across various sources and databases. OR the state of data in which all copies or instances are the same across all systems and databases.	J2
4(b)(i)	Form	J1
4(b)(ii)	Report	J1
5(a)(i)	Monitoring systems- Monitoring systems is a networking technology to determine the current location or status of an object	J2

5(a)(ii)	Telemedicine - Telemedicine can be defined as the use of network technology (computers, video, phone, messaging) by a medical professional to diagnose and treat patients. OR Telemedicine is the use of networking technology to provide medical information and services.	J2
5(b)(i)	It is also referred to as Wired or Bounded transmission media. OR Signals being transmitted are directed and confined in a narrow pathway by using physical links.	J2
5(b)(ii)	Wireless transmission media	J1
5(b)(iii)	Cellular radio Infrared	J1 J1
5(c)(i)	communications device is any type of hardware capable of transmitting data, instructions, and information between a sending device and a receiving device	J2
5(c)(ii)	Modem Network device used to connect a computer to a network over telephone lines. Convert digital signals (such as those used by a computer) to modulated analog signals (such as those used by conventional telephone lines) and vice versa.	J1 J1
5(c)(iii)	switch / hub	J1
5(c)(iv)	Network interface card (NIC) Switch Repeater	Select any two (2) J1, J1
5(c)(v)	NIC - network device used to connect a computer to a network Switch -The primary function of a switch in a network is to facilitate communication between devices within a local area network (LAN) Repeater -The primary function of a repeater is to extend the reach of a network by regenerating and retransmitting signals.	J2 Select any one (1)
6(a)	Search engine – a search tools that uses keyword to find information that related to specific topic/content <i>OR</i> Search engine – a program that search for and identify items in a database that corresponding to keywords or characters specified by the user, used especially for finding particular sites on the World Wide Web.	J1

	Subject directory – collection of websites that include organized browsable subject categories and sub categories. <i>OR</i> Subject directory – search tool that classifies webpages in an organized set of categories and sub categories.	J1
6(b)	• Boolean operators/Search operators • Phrase searches • Field search • Boolean operators	J1 J1 J1 J1
6(c)	i. Social Networking/social media -Instagram/Facebook/Tiktok ii. E- commerce/online shopping - Shopee, Lazada, Tiktok iii. Online Entertainment - Netflix, iTunes, Spotify, Amazon MP3	J1 J1 J1 J1 J1 J1 or any acceptable answer
6(d)	• censorship can filter and block information <i>AND</i> • prevent fake news from spreading widely to others. • minimize cybersecurity threats from attacking an individual or organization on the network. • preventing sensitive / provocative issues.	J1 J1 or any acceptable answer
6(e)	• Get the latest anti-virus and firewall software • Create a strong and easy-to-remember password • <u>Never</u> share your password • Fill only necessary information on any registration forms • Limit the amount of information you provide on websites • install cookie manager to filters cookies	Select any two (2) J2 or any acceptable answer
6(f)(i)	• job redeployment due to change in skills requirement	Select any one (1) J2

	● irresponsible use and manipulation of technology to cause harm ● erosion of trust in society due to increased privacy concern and cyber threats ● widening inequality increases disparities in health, education, housing, and employment. ● deterioration of value and ethics increasing crimes resulting in fear and threat among innocent masses ● social interaction and societal well being affected	
6(f)(ii)	● Smart doorbells help secure your home against break-ins, fire, and floods ● Smart / IP cameras help monitor your home ● Smart Heating & Cooling system be able to adjust temperatures for your comfort from anywhere ● Smart refrigerators have a variety of features that you can control via mobile phone app such as monitor what's inside, and a touchscreen on which you can pull up recipes or create shopping lists. ● Smart appliances are compatible with industry voice assistants, so you can ask Siri, Alexa, or Google Assistant to dispense ice or turn on your oven.	Select any one (1) J2 OR any appropriate answer
